

Hello!

I am very interested in your configuration administrator role at Oracle!

I am currently fluent in JavaScript and pick up new tech quickly. I am interested how Oracle uses automated systems to analyze complex business problems. My coding, unit testing, and troubleshooting experience are all highly relevant to the job listing and I feel I have the skills to become a strong member of your team.

I am eager to work with the best and brightest using the best technology to solve challenging problems!

Regards,

James Harlan
